# Exclusive, complimentary, turn-key dental health reporting

The Dental Action Report (DAR), powered by Healthentic, dives deep into your company's data, revealing more than traditional claims reporting. It examines your employees' oral health behaviors and identifies opportunities for improving oral health. The DAR helps you make informed wellness decisions to create a healthy workforce.

## Meaningful data at your fingertips

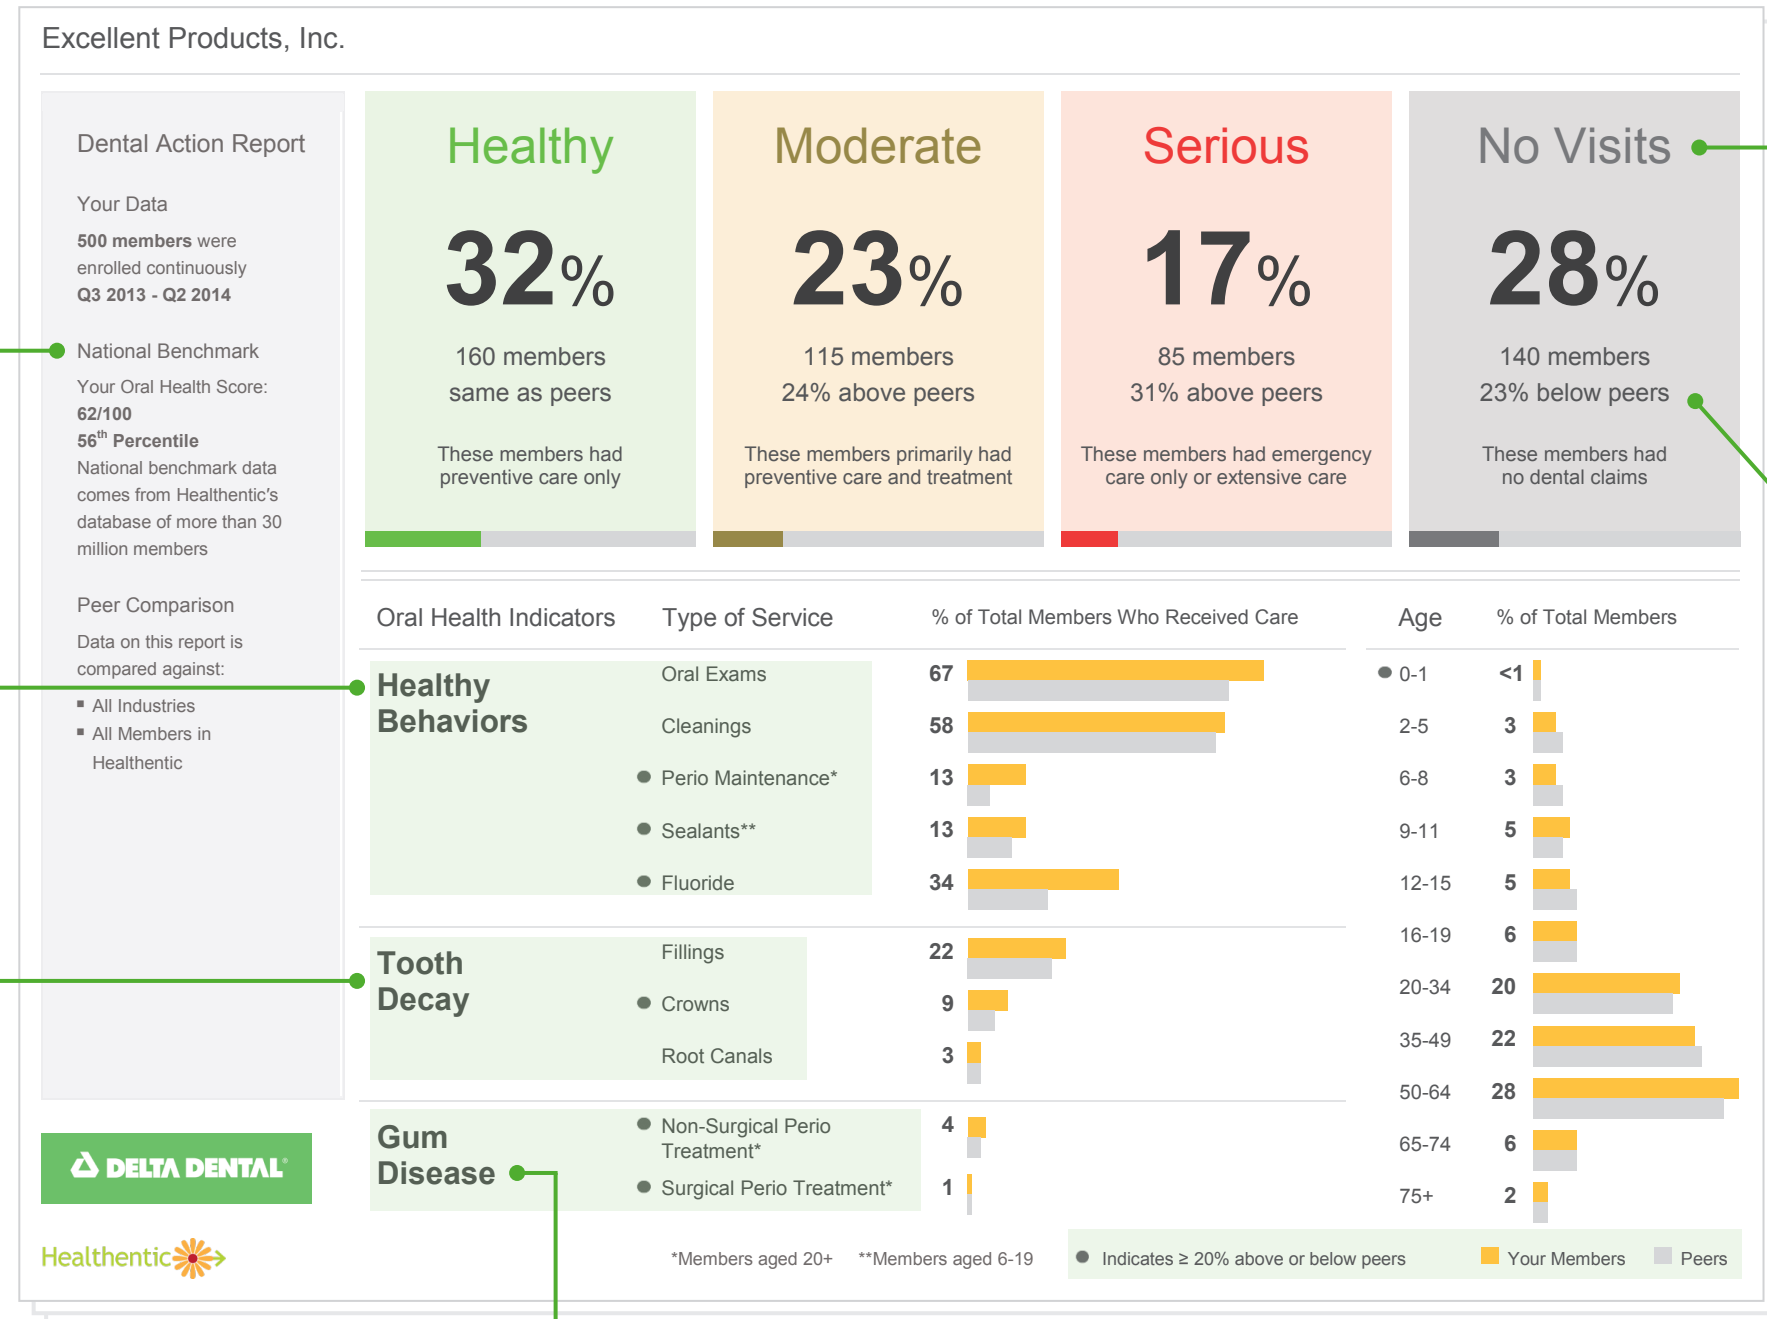

The DAR dashboard crunches the data so you don't have to.

Dental health reporting is available to groups with 100+ subscribers once they've been with us for 15 months.

**Learn how you compare nationally and locally**  
Healthentic benchmarks your company's data against peers of similar industry and size from a database of over 40 million members.

**Wellness opportunity**  
See what percentages of members received preventive care or perio maintenance treatment. The higher the percentages, the healthier your workforce.

**Cost difference**  
Later in the report, you'll also see the restorative care cost difference between members aged 6-19 who received sealants and those who didn't. 2014 national benchmark data showed a difference of \$69 per year per member.

### Cost Difference

Later in the report, see how much money a member who received treatment but didn't have an oral exam compares to those who had oral exams. 2014 national benchmark data showed a difference of \$304 per year per member.

**See how your population compares against similar Delta Dental groups, nationwide.**

And this dashboard only scratches the surfaces of the valuable information you get from the DAR. The rest of the report provides key insights into every item you see here. Use the information to create targeted communications and develop effective wellness plans.

### Wellness opportunity

Learn how many didn't receive treatment and follow-up care. Untreated gum disease is associated with other health problems such as diabetes and hypertension—which can impact medical costs.
